

WHITE PAPER

ABSTRACT

REOKS is a BEP-20 Token project dedicated to promoting environmentalism and sustainability. We aim to raise awareness about environmental consciousness within the community and advocate for sustainable living. Believing that small steps can lead to significant changes, we strive to make impactful efforts with creative ideas to contribute to a greener world for future generations.

Our Initiatives:

Innovative Recycling: We develop innovative recycling machines and applications to actively address waste issues, reduce environmental pollution, and conserve natural resources.

REOKS Store: The REOKS Store, featuring products made from recycled materials, plays a crucial role in bringing waste back into the economy.

REOKS Forum: Accessible through our website, the REOKS Forum serves as a platform for discussions on ecological issues and the exchange of practical solutions. Users who propose well-received solutions are rewarded with REOKS Tokens, creating an incentive structure that encourages contributions in the sustainability field and fosters greater awareness and community participation.

REOKS Mobile App: Seamlessly integrated with our Reomate machines, the REOKS mobile application provides users with a practical means to execute recycling processes. Users can track the REOKS Tokens they have earned from their recycling activities through the app and stay updated on current news related to environmentalism.

Dividium: REOKS Games' inaugural mobile strategy game, Dividium, appeals to gamers of all levels. Players can expedite their progress within the game or for investment purposes in their wallets using REOKS Tokens.

REOKS Token: The REOKS Token, forming the foundation of the REOKS ecosystem, is a reward and in-game currency earned by users in exchange for their recycling activities and other contributions on the platform.

1. Introduction

The world faces pressing challenges, including climate change and the depletion of raw materials due to irresponsible consumption. To address these threats, we have established an ecosystem that actively promotes measures to mitigate them. Our goal is to inspire environmental impact reduction and reward efforts. Through robust recycling initiatives and impactful awareness campaigns, our overarching goal is to heal the planet.

1.1 Global Issues

The escalating global population, coupled with irresponsible consumption of finite resources and inadequate recycling efforts, is contributing to the worsening degradation of our planet. Without addressing these issues, the Earth we bequeath to future generations may be unable to sustain itself, making the task of providing a habitable environment increasingly challenging.

Ecological problems arise from numerous factors impacting ecosystems. Some of the most prevalent issues include:

1. Global Warming: The increase in levels of carbon dioxide and other heat-trapping gases leads to a rise in atmospheric temperature. This temperature increase results in adverse effects on living conditions, such as the melting of glaciers, rising sea levels, and climate change.

2. Diminishing Biodiversity: Human activities have caused a reduction in the diversity of species on Earth, exemplified by the destruction of forests and the decline of marine species. Such reductions pose a serious problem for all living organisms on Earth.

3. Excessive Production: Uncontrolled production, driven by the lack of encouragement for recycling and the increasing demand for raw materials, has become a significant issue. This situation contributes to the continuous pollution of air, soil, and water.

1.2 Solutions

Over the years, we have become increasingly aware that the ecological problems we once ignored have deepened significantly. To combat these issues, we have implemented various innovative projects. Through the REOKS Forum, our goal is to raise awareness in communities and make recycling processes more practical with Reomates and the REOKS App. Additionally, via our online shop, the REOKS Store, we sell environmentally friendly products, giving recycled waste a new lease on life.

We also aim to increase public awareness and create a more sustainable living environment through events organized in collaboration with organizations focused on environmental issues. Furthermore, our NFT collections are designed to promote sustainability and environmental consciousness.

By integrating these efforts, we strive to build a community that is more mindful of ecological challenges and actively participates in creating a sustainable future.

1.2.1 REOKS Forum

REOKS Forum serves as a platform where individuals committed to environmental and social responsibility converge. Our objective is to foster interaction among users and generate innovative solutions to ecological challenges. Members who submit the most effective solution proposals are rewarded with REOKS Tokens in recognition of their achievements.

These suggestions undergo careful evaluation and are implemented by our dedicated team. In this manner, users not only contribute to securing our future but also have the opportunity to earn gratifying rewards by proposing effective solutions to ecological problems.

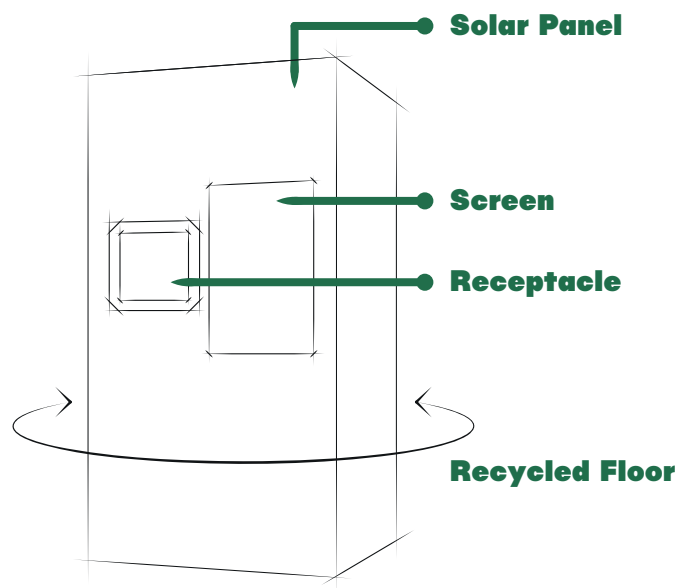

With expert moderators overseeing the forum and continuous monitoring in place, users can freely express their ideas. Our moderators promptly and effectively intervene in disputes among users to ensure the maintenance of a peaceful environment and the decline of marine species. Such reductions pose a serious problem for all living organisms on Earth.

1.2.2. Reomate

Reomate is a fundamental component of our ecosystem, representing the general name of our machines, particularly those located in densely populated areas with high-security standards. Thanks to our machines, recycling processes have become highly practical. Upon scanning the QR code on the Reomate screen, the machine compartment opens, and the user deposits plastic, glass, and aluminum bottles. After this step, the transaction is completed, and the calculated amount of REOKS Tokens is automatically transferred to the user's wallet.

The bottles within Reomate are classified according to their types and directed to different compartments. At this stage, the waste undergoes pressing to allow our automation systems to operate efficiently for an extended period without needing to be emptied. Glass and aluminum bottles collected during the operation process are sent to recycling facilities, where they are recycled and made available for reuse. Plastic bottles are processed through our facilities, transforming them into high-quality granules. The obtained granules are used to produce products available in the REOKS Store.

Additionally, the Golden Bottle award is given to one randomly selected recycling process each week, allowing the fortunate user to increase their earnings up to 100 times.

1.2.3. REOKS App

The REOKS mobile application empowers users to embrace an eco-friendly lifestyle. Through the app, users can seamlessly complete recycling processes using Reomates. Locate the nearest Reomate, track your recycled bottle count, stay informed with current ecological news, and monitor your REOKS Token balance - all conveniently at your fingertips.

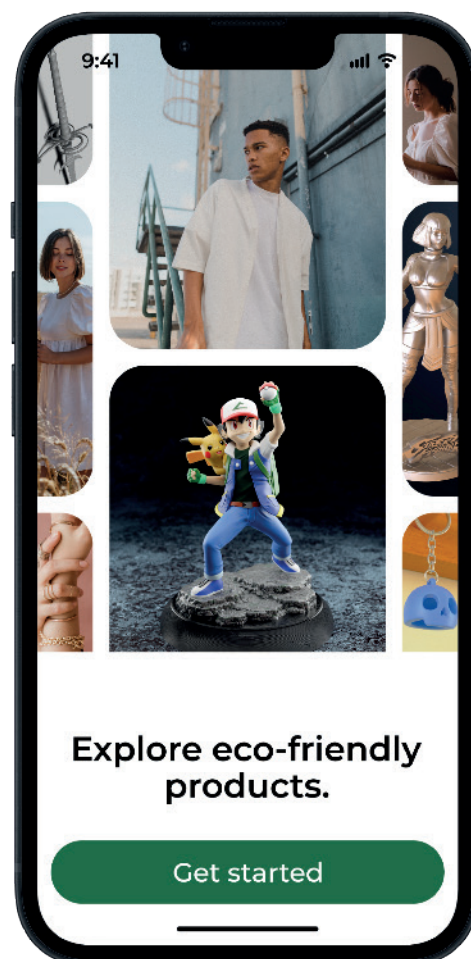

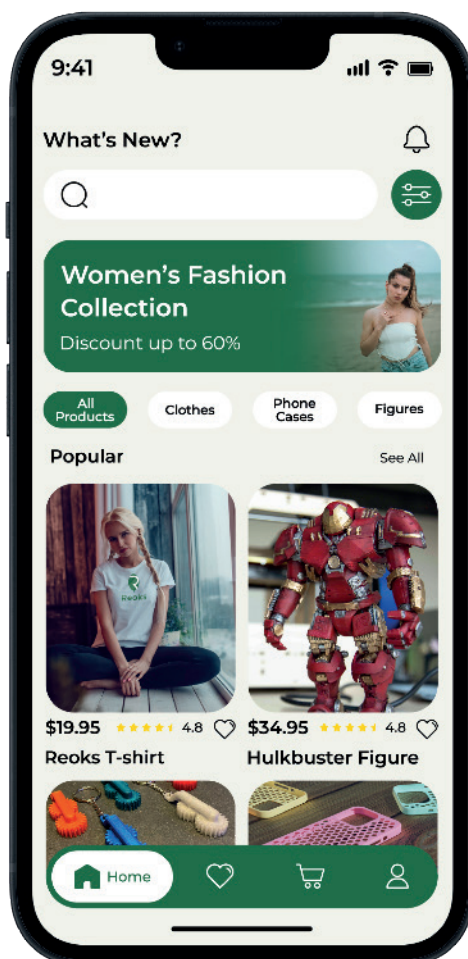

The app's leaderboard adds a fun competitive element. Users who consistently rank high on the leaderboard each month are rewarded with REOKS Tokens, granting them access to exclusive discounts in the REOKS Store or increased voting power on future ecological initiatives. This system not only incentivizes users but also enhances environmental awareness.

1.2.4 REOKS Store

The REOKS Store offers a wide variety of products made from different materials. These include filaments made from recycled plastic waste and fabrics sourced from unused clothing. The production process is meticulous and aims to protect the environment while providing customers with high-quality products at affordable prices.

By reusing waste and using sustainable materials, the REOKS Store follows an environmentally friendly approach, contributing significantly to conserving natural resources and reducing waste. With a focus on environmentalism and economic viability, the REOKS Store aims to lead its field and influence fashion and consumption in a more sustainable direction.

2. REOKS Games

REOKS Games makes a great effort to reduce carbon footprint by encouraging the use of details that can create environmental awareness within the game. Our team provides an exemplary model for the industry by managing the game development process with an environmental awareness. As a result of these efforts, fun games are produced and important steps are taken to protect natural resources and reduce waste.

2.1 Dividium

Throughout the years, shortsighted decisions by leaders and society's disregard for ecological issues have nearly exhausted natural resources. This dire situation has brought humanity to a critical juncture, endangering the sustainability of life on Earth. In response to this challenging period, the remaining survivors opted to come together under a single civilization. However, following a period of unity and peace, a power struggle among three leaders led to the fragmentation of the kingdom, dividing it into three separate regions.

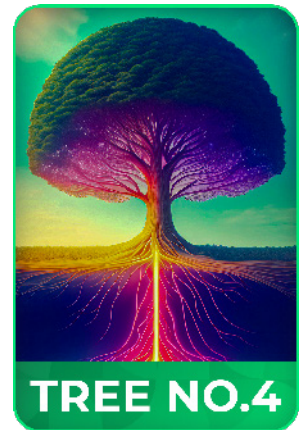

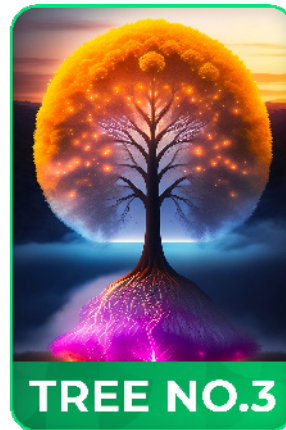

In this new world order, choose your side, gain the upper hand against your opponents in wars, and proudly wave your flag. Develop your civilization with the loot you earn, gain a strategic advantage over your enemies, and seize the opportunity to earn REOKS Tokens by participating in various tournaments.

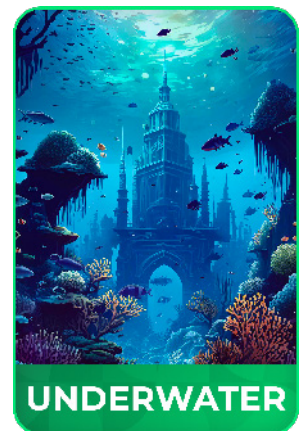

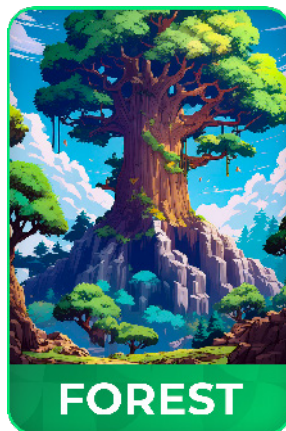

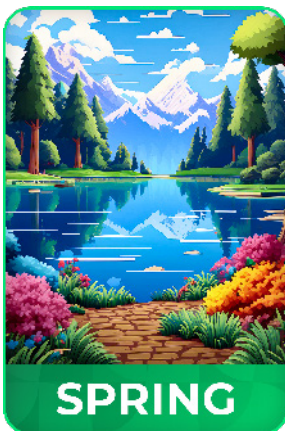

3. NFT Collections

Our goal is to raise awareness by creating NFT collections that showcase endangered species and recyclable materials. Proceeds from the sale of NFT's in these special collections will be used to fund initiatives such as reforestation, environmental cleanup, and other important activities. As a result, investors who own NFT pieces will not only own valuable art, but will also be contributing to the significant efforts we are making to preserve the world.

4. Tokenomics

REOKS has a fixed supply of 1,000,000,000 tokens, which will be allocated.

REOKS has a fixed supply of

GROUP	% ALLOCATION	REOKS ALLOCATION	VESTING PERIOD	REOKS ALLOCATION
PUBLIC SALE	25	250,000,000	%19 TGE	%9 MONTHLY
LIQUIDITY	15	150,000,000	%10 TGE	%9 MONTHLY
MARKETING	7	70,000,000	-	-
AIRDROP	3	30,000,000	-	-
TEAM	15	150,000,000	3 MONTHS CLIFF	%20 MONTHLY
REWARDS	35	350,000,000	-	-

TOE: Token Generation Event

5. Roadmap

Q2 2024

Reomate Prototype
REOKS Website
Community Growth
REOKS Forum

Q3 2024

Community Growth
Airdrop Distribution
REOKS Forum
Listing on CEX
Contract Audit

Q4 2024

REOKS App Launch
Partnerships
NFT Collections

Q1 2025

Reomate Settlements
Awareness Organizations

Q2 2025

Dividium Game Closed Beta
REOKS Store Launch
& More
